This chart gives information about the marks scored by each student in different assignments. The darker the shade the lesser the marks indicating failure.

The majority of students received a grade of C, with 15 students in this category. • There are 7 students who received a D grade. Only 2 students received an F grade. The number of students decreases as the grade level increases (from C to A).

The scatter plot shows the relationship between Midterm and Final scores for the students. The data points are widely scattered, indicating a relatively weak correlation between Midterm and Final scores. Some students performed better in the Final compared to the Midterm, while others performed worse. There is no clear linear trend or pattern in the data, suggesting that Midterm scores influence Final scores.

The bar chart displays the Final scores for each student. The majority of students have a Final score in the range of 70-100, with some outliers below 70. The highest Final score is 100, achieved by several students. The chart provides an overview of the distribution of Final scores, highlighting the performance of individual students.
